The Benefits of Online Backup & Local Backup

KeepVault provides simultaneous backup to both our online servers and to a local drive. Backup to online storage protects you against hard drive failure, and disasters like floods, earthquakes, fire, and theft. It also offers the advantage of optional web access. Local backups provide extra speed and convenience but do not protect you against theft, fire, or other disastrous loss.

Best-in-class margins

- Earn best in class margins by administrating the KeepVault service to your customers, either branded with KeepVault or with your own custom co-brand.
- Create sub-user accounts for each of your clients with unique credentials and encryption for each client.
- Set your own pricing for the backup service or include it in a bundle of services.
- Pay for storage at a discounted rate which never increases
- You keep the difference

Reseller Web Console

- Web based administration controls and reports for each of your clients
- Create unique credentials for each of your clients, with optional custom encryption settings
- Dynamically partition storage space from your master account to define online storage capacity for each client account
- Daily status reports show the status of all of your clients' backups
- Optionally enable each sub-user's web access for access to their data from any web browser
- Signup for a trial of KeepVault Pro & Business to confirm it meets your needs at www.keepvault.com/msp
- Pro & Business reseller accounts starting at \$59.99/mo

Co-branding

Qualifying resellers can co-brand the client software to provide a consistent image to your customers.
